ADDITIONAL INFORMATION

Related Product Information for anti-FOP antibody	FOP is a novel chromatin target of protein arginine methyltransferases. Human Fop is encoded by C1orf77, a gene of previously unknown function. Fop is tightly associated with chromatin, and is modified by both asymmetric and symmetric arginine methylation in vivo. Furthermore, Fop plays an important role in the ligand-dependent activation of estrogen receptor target genes, including TFF1 (pS2).
Product Categories/Family for anti-FOP antibody	DNA & RNA
