

Bone Morphogenetic protein-7 Recombinant Protein | BMP-7 recombinant protein

Human Bone Morphogenetic protein-7 Recombinant

CATALOG #	HOST
AAA76056	N/A (Host protein expression may be lot-specific and can be subject to change during production, including bulk orders)

PRODUCT SYNONYMS

Bone Morphogenetic protein-7; Human Bone Morphogenetic protein-7 Recombinant; bmp7; bmp-7; op1; BMP-7 recombinant protein

PRODUCT SPECIFICATIONS

Host	N/A (Host protein expression may be lot-specific and can be subject to change during production, including bulk orders)
Purity/Purification	>95%, as determined by SDS-PAGE and HPLC
Form/Format	Recombinant BMP-7 was lyophilized from a 0.2 um filtered PBS solution pH 7.4.

Sequence Length	431
Source	Optimized DNA sequence encoding Human Bone Morphogenetic protein-7 mature chain was expressed in E. coli.
Endotoxin	Endotoxin content was assayed using a LAL gel clot method. Endotoxin level was found to be less than 0.1 ng/ug (1EU/ug).
Reconstitution	A quick spin of the vial followed by reconstitution in distilled water to a concentration not less than 0.1 mg/mL. This solution can then be diluted into other buffers.
Molecular Weight Note	Native human BMP-7 is generated by the proteolytic removal of the signal peptide and propeptide, the molecule has a calculated molecular mass of approximately 17 kDa. Recombinant BMP-7 is a disulfide-linked homodimeric protein consisting of two 139 amino acid residue subunits, and migrates as an approximately 30 kDa protein under reducing conditions in SDS-PAGE.
Preparation and Storage	The lyophilized protein is stable for at least 2 years from date of receipt at -20 degree C. Upon reconstitution, this cytokine can be stored in working aliquots at 2 degree - 8 degree C for one month, or at -20 degree C for six months, with a carrier protein without detectable loss of activity. Avoid repeated freeze/thaw cycles.

ADDITIONAL INFORMATION

Related Product Information for BMP-7 recombinant protein	BMP-7 (osteogenic protein- 1) is produced in the kidney and in the nervous system. It is produced also by human fetal trophoblasts in vivo and may be involved in the regulation of the synthesis of chorionic gonadotropin and progesterone by trophoblasts. BMP7 induces new bone growth, and forms heterodimers with BMP2A. The factor is a member of the TGF family of proteins.
