

Mouse Vimentin Monoclonal Antibody | anti-VIM antibody

Mouse anti Vimentin, conjugated with FITC

CATALOG #	HOST	REACTIVITY	APPLICATIONS
AAA77503	Mouse	Canine, Caprine, Chicken, Hamster, Human, Monkey, Mouse, Rat, Swine, Xenopus, Zebrafish	Immunohistochemistry, Immunocytochemistry, Flow Cytometry, Functional Assay

PRODUCT SYNONYMS

Vimentin; Monoclonal Antibody; Mouse anti Vimentin; conjugated with FITC; anti-VIM antibody

PRODUCT SPECIFICATIONS

Host	Mouse
Reactivity	Canine, Caprine, Chicken, Hamster, Human, Monkey, Mouse, Rat, Swine, Xenopus, Zebrafish
Clonality	Monoclonal
Isotype	IgG1
Clone Number	RV202
Specificity	RV202-FITC reacts exclusively with vimentin, which is expressed in mesenchymal cells and mesenchymal derived tumors e.g. lymphoma, sarcoma and melanoma.
Form/Format	Each vial contains 1ml FITC-conjugated vimentin monoclonal antibody in PBS containing 0,1% BSA, 0.09% sodium azide. Approximately 100 tests.
Applicable Applications for anti-VIM antibody	IHC (Immunohistochemistry), ICC (Immunocytochemistry), FCM/FACS (Flow Cytometry)
Host Note	RV202 is a mouse monoclonal IgG1 antibody derived by fusion of SP2/0-Ag14 mouse myeloma cells with spleen cells from a BALB/c mouse immunized with a cytoskeletal vimentin extract of calf lens.
Preparation and Storage	The antibody is shipped on blue ice and may be stored at +4°C. For prolonged storage prepare appropriate aliquots and store at or below -20°C. Prior to use, an aliquot is thawed slowly in the dark at ambient temperature, spun down again and used to prepare working dilutions by adding sterile phosphate buffered saline (PBS, pH 7.2). Repeated thawing and freezing should be avoided. Working dilutions should be stored at +4°C, not refrozen, and preferably used the same day. If a slight precipitation occurs upon storage, this should be removed by centrifugation. It will not affect the performance or the concentration of the product.

ADDITIONAL INFORMATION

Related Product Information for anti-VIM antibody	Vimentin (57 kDa) is the intermediate filament protein (IFP) of mesenchymal cells. This IFP however often deviates from the tissue-specific and developmentally regulated pattern of expression. Besides its typical expression in most cultured cells, vimentin is also expressed together with several other IFPs during early stages of development. As differentiation proceeds, vimentin is exchanged for the tissue-specific intermediate filament type. Also in cancers, vimentin is often expressed in addition to the tissue-specific IFP.
Product Categories/Family for anti-VIM antibody	Cytoskeletal; Tumour marker; Cancer; Cytoskeleton; Immunology; Neurobiology; Stem cell research
