

Human TSH ELISA Kit | TSH elisa kit

TSH ELISA Kit

CATALOG #
AAA77748

REACTIVITY
Human

PRODUCT SYNONYMS

TSH; TSH ELISA Kit; TSH ELISA; TSH elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Assay Type	Quantitative Sandwich
Samples	Human serum
Intended Uses	The TSH Streptavidin ELISA Kit is intended for the quantitative measurement of TSH in human serum. For research use only.
Preparation and Storage	Product should be stored at 2-8 degree C. Product is stable for 24 months from the date of manufacturing.

ADDITIONAL INFORMATION

Related Product Information for TSH elisa kit	Principle of the Assay: The TSH is a solid phase sandwich ELISA method. The samples and anti-TSHHRP/Biotin conjugate are added to the wells coated with Streptavidin. TSH in the patient's sample forms a sandwich between two specific antibodies to TSH. Unbound protein and HRP conjugate are washed off by wash buffer. Upon the addition of the substrate, the intensity of color is proportional to the concentration of TSH in the samples. A standard curve is prepared relating color intensity to the concentration of the TSH. Intended Uses: The TSH ELISA Kit is intended for the quantitative measurement of TSH in human serum. For Research Use Only. Not for use in Test Procedures.
Product Categories/Family for TSH elisa kit	Thyroid Markers

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
