

Podoplanin, soluble Recombinant Protein | Pdpn recombinant protein

Mouse Podoplanin, soluble

CATALOG #
AAA79189

HOST
E Coli

PRODUCT SYNONYMS

Podoplanin; soluble; Mouse Podoplanin; Recombinant Mouse soluble Podoplanin; GP36; Glycoprotein 36; Aggrus; T1-alpha; Pdpn recombinant protein

PRODUCT SPECIFICATIONS

Host	E Coli
Purity/Purification	> 95% by SDS-PAGE & silver stain
Form/Format	Lyophilized
Sequence	N-Terminal Sequence:G TIGVNEDDIV TPGT
Sequence Length	126
Reconstitution	We recommend a quick spin followed by reconstitution in water to a concentration of 0.1 - 1.0 mg/ml. This solution can then be diluted into other aqueous buffers and stored at 4°C for 1 week or -20°C for future use.
Length(aa)	126
Stabilizer	None
Buffer	PBS
Preparation and Storage	The lyophilized protein is stable for a few weeks at room temperature, but best stored at -20 degree C. Reconstituted sPodoplanin should be stored in working aliquots at -20 degree C.

IMAGES

Application Data

SDS-PAGE analysis of recombinant mouse soluble Podoplanin. Sample was loaded in 15% SDS-polyacrylamide gel under reducing conditions and stained with Silver stain.

ADDITIONAL INFORMATION

Related Product Information for Pdpn recombinant protein	Podoplanin, also known as glycoprotein 38 (gp38), PA2.26 antigen, T1alpha (T1A), and aggrus, is a 38 kDa type I transmembrane sialoglycoprotein and member of the podoplanin family. Podoplanin is synthesized as a 172 amino acid (aa) precursor with a 22 aa signal sequence, a 119 aa extracellular domain (ECD), a 21 aa transmembrane region, and a short, 10 aa cytoplasmic tail. The ECD contains abundant Ser/Thr residues as potential sites for Oglycosylation, and the cytoplasmic region contains putative sites for kinase C and cAMP phosphorylation. Mouse Podoplanin shares 77% and 46% aa sequence identity with rat and human Podoplanin, respectively. Podoplanin is expressed on glomerular epithelial cells (podocytes), type I lung alveolar cells, lymphatic endothelial cells, and on numerous tumors including colorectal tumors, squamous cell carcinomas, testicular seminoma, and brain tumors. One study shows high expression of Podoplanin mRNA in placenta, lung, skeletal muscle, and heart, and weaker levels in brain, kidney, and liver. Podoplanin is the ligand for Ctype lectin like receptor 2 (CLEC2). Their association is dependent on sialic acid on Oglycans of Podoplanin. Through its association with CLEC2, Podoplanin induces platelet aggregation and tumor metastasis. Podoplanin is also necessary for lymphatic vessel formation, normal lung cell proliferation and alveolus formation at birth.

NCBI AND UNIPROT INFORMATION

NCBI GI #	113462005
NCBI GeneID	14726
NCBI Accession #	NP_034459.2
NCBI GenBank Nucleotide #	NM_010329.2
UniProt Accession #	Q62011; Q546R8; Q61612; A2A8J3
Molecular Weight	13,42 kDa
NCBI Official Full Name	podoplanin
NCBI Official Synonym Full Names	podoplanin
NCBI Official Symbol	Pdpn
NCBI Official Synonym Symbols	T1a; Gp38; OTS-8; T1alpha; RANDAM-2; T1-alpha
NCBI Protein Information	podoplanin; aggrus; PA2.26 antigen; glycoprotein 38; transmembrane glycoprotein E11
UniProt Protein Name	Podoplanin
UniProt Gene Name	Pdpn
UniProt Synonym Gene Names	Gp38; Ots8; Gp38; T1A
UniProt Entry Name	PDPN_MOUSE

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
