

## Human Heparin-Platelet factor4 Complex antibody (IgG) ELISA Kit

Human Heparin-Platelet factor4 Complex antibody, IgG ELISA Kit

CATALOG #  
**AAA80168**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

Heparin-Platelet factor4 Complex antibody (IgG); Human Heparin-Platelet factor4 Complex antibody; IgG ELISA Kit; Human Heparin-Platelet factor4 Complex antibody (IgG) ELISA Kit; Heparin-Platelet factor4 Complex antibody (IgG) elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                   |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                             |
| Samples                 | Serum, plasma                                                                                                                     |
| Detection Wavelength    | 450 nm                                                                                                                            |
| Sample Volume           | 50-100ul                                                                                                                          |
| Preparation and Storage | Unopened test kits should be stored at 2 to 8 degree C upon receipt. Please refer to pdf manual for further storage instructions. |

### ADDITIONAL INFORMATION

**Related Product Information for Heparin-Platelet factor4 Complex antibody (IgG) elisa kit**

**Principle of the Assay:** The microtiter plate provided in this kit has been pre-coated with specificity antigen. Samples are then added to the appropriate microtiter plate wells and incubated. Then add Horseradish Peroxidase (HRP)-conjugated anti-human IgG to each well and incubate. Finally, a TMB (3,3',5,5' tetramethyl-benzidine) substrate solution is added to each well. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. Calculate the valence of human Heparin-Platelet factor 4 Complex antibody(IgG) in the samples.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
