

## Mouse ferritin, FE ELISA Kit | FE elisa kit

Mouse ferritin, FE ELISA Kit

CATALOG #  
**AAA80325**

REACTIVITY  
**Mouse**

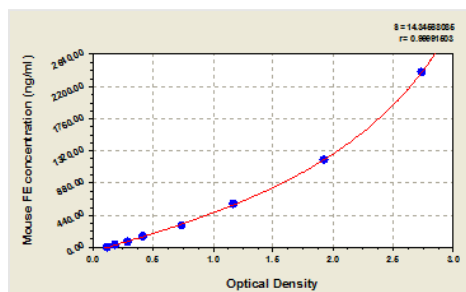

### PRODUCT SYNONYMS

ferritin; FE; Mouse ferritin; FE ELISA Kit; FE elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                   |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Mouse                                                                                                                                                                             |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of mouse FE. No significant cross-reactivity or interference between mouse FE and analogues was observed. |
| Samples                 | Serum, plasma, cell culture supernates, tissue homogenates                                                                                                                        |
| Assay Type              | Quantitative Sandwich                                                                                                                                                             |
| Detection Range         | 37.5 ng/ml-2400 ng/ml                                                                                                                                                             |
| Sensitivity             | <9.4 ng/ml                                                                                                                                                                        |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): CV%<8%. Three samples of known concentration were tested twenty times on one plate to assess.                                  |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): CV%<10%. Three samples of known concentration were tested in twenty assays to assess.                                           |
| Preparation and Storage | Unopened test kits should be stored at 2 to 8 degree C upon receipt. Please refer to pdf manual for further storage instructions.                                                 |

### ADDITIONAL INFORMATION

#### Related Product Information for FE elisa kit

Principle of the Assay: This assay employs the quantitative sandwich enzyme immunoassay technique. Antibody specific for FE has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any FE present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for FE is added to the wells. After washing, avidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of FE bound in the initial step. The color development is stopped and the intensity of the color is measured.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
