

Mouse High density lipoprotein, HDL ELISA Kit

mouse High density lipoprotein, HDL ELISA Kit

CATALOG #
AAA80465

REACTIVITY
Mouse

PRODUCT SYNONYMS

High density lipoprotein; HDL; mouse High density lipoprotein; HDL ELISA Kit; HDL elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of mouse HDL. No significant cross-reactivity or interference between mouse HDL and analogues was observed.
Sequence Length	17
Samples	Serum, plasma, tissue homogenates
Assay Type	Sandwich
Detection Range	31.2 5 ng/ml - 2000 ng/ml.
Sensitivity	The minimum detectable dose of mouse HDL is typically less than 7.8 ng/ml. The sensitivity of this assay, or Lower Limit of Detection (LLD) was defined as the lowest protein concentration that could be differentiated from zero. It was determined the mean O.D value of 20 replicates of the zero standard added by their three standard deviations.
Intra-assay Precision	Intra-assay Precision (Precision within an assay): CV%<8%. Three samples of known concentration were tested twenty times on one plate to assess.
Inter-assay Precision	Inter-assay Precision (Precision between assays): CV%<10%. Three samples of known concentration were tested in twenty assays to assess.
Preparation and Storage	Unopened test kits should be stored at 2 to 8 degree C upon receipt. Please refer to pdf manual for further storage instructions.

ADDITIONAL INFORMATION

Related Product Information for High density lipoprotein, HDL elisa kit	Principle of the assay: This assay employs the quantitative sandwich enzyme immunoassay technique. Antibody specific for HDL has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and any HDL present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for HDL is added to the wells. After washing, avidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of HDL bound in the initial step. The color development is stopped and the intensity of the color is measured.

NCBI AND UNIPROT INFORMATION

NCBI GI #	1245864
NCBI Official Full Name	high density lipoprotein, HDL {N-terminal}, partial

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
