

Rabbit Cartilage glycoprotein 39 ELISA Kit | gp-39 elisa kit

Rabbit Cartilage glycoprotein 39 ELISA Kit

CATALOG #
AAA82133

REACTIVITY
Rabbit

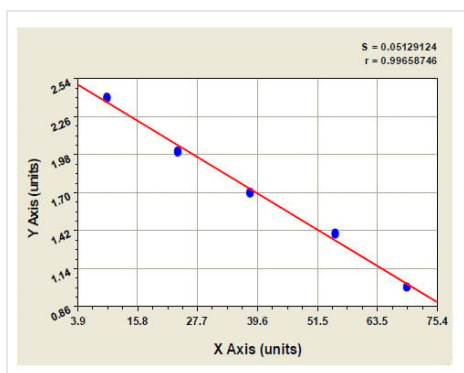

PRODUCT SYNONYMS

Cartilage glycoprotein 39; Rabbit Cartilage glycoprotein 39 ELISA Kit; gp-39 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 ng/mL.
Intended Uses	This gp-39 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit gp-39. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

Principle of the assay: gp-39 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-gp-39 antibody and an gp-39-HRP conjugate. The assay sample and buffer are incubated together with gp-39-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the gp-39 concentration since gp-39 from samples and gp-39-HRP conjugate compete for the anti-gp-39 antibody binding site. Since the number of sites is limited, as more sites are occupied by gp-39 from the sample, fewer sites are left to bind gp-39-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The gp-39 concentration in each sample is interpolated from this standard curve.
