

Rabbit Galectin 3 ELISA Kit | GAL3 elisa kit

Rabbit Galectin 3 ELISA Kit

CATALOG #
AAA82381

REACTIVITY
Rabbit

PRODUCT SYNONYMS

Galectin 3; Rabbit Galectin 3 ELISA Kit; GAL3 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Specificity	This assay has high sensitivity and excellent specificity for detection of GAL-3. No significant cross-reactivity or interference between GAL-3 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between GAL-3 and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive or Sandwich
Sensitivity	1.0pg/mL
Preparation and Storage	Store all reagents at 2-8°C.

ADDITIONAL INFORMATION

Related Product Information for GAL3 elisa kit	Intended Uses: This GAL-3 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit GAL-3. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: GAL-3 ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for GAL-3. Standards or samples are then added to the microtiter plate wells and GAL-3 if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of GAL-3 present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for GAL-3 are added to each well to "sandwich" the GAL-3 immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain GAL-3 and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The GAL-3 concentration in each sample is interpolated from this standard curve.
