

Human Soluble P53 ELISA Kit | sP53 elisa kit

Human Soluble P53 ELISA Kit

CATALOG #
AAA82476

REACTIVITY
Human

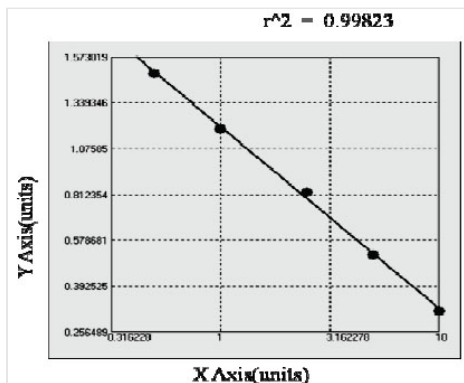

PRODUCT SYNONYMS

Soluble P53; Human Soluble P53 ELISA Kit; sP53 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	1.0-25ng/mL
Sensitivity	0.1ng/mL
Intended Uses	This Soluble P53 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human Soluble P53. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

Principle of the assay: Soluble P53 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-Soluble P53 antibody and an Soluble P53-HRP conjugate. The assay sample and buffer are incubated together with Soluble P53-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Soluble P53 concentration since Soluble P53 from samples and Soluble P53-HRP conjugate compete for the anti-Soluble P53 antibody binding site. Since the number of sites is limited, as more sites are occupied by Soluble P53 from the sample, fewer sites are left to bind Soluble P53-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Soluble P53 concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
