

## Mouse Lipocalin 2 ELISA Kit | LCN2 elisa kit

Mouse Lipocalin 2 ELISA Kit

CATALOG #  
**AAA82517**

REACTIVITY  
**Mouse**

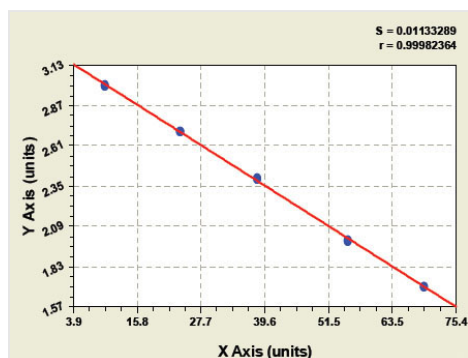

### PRODUCT SYNONYMS

Lipocalin 2; Mouse Lipocalin 2 ELISA Kit; LCN2 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                        |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Mouse                                                                                                                                                                                  |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                             |
| Assay Type              | Competitive                                                                                                                                                                            |
| Sensitivity             | 1.0 pg/mL.                                                                                                                                                                             |
| Intended Uses           | This LCN2 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse LCN2. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                    |

### ADDITIONAL INFORMATION

#### Related Product Information for LCN2 elisa kit

**Principle of the assay:** LCN2 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-LCN2 antibody and an LCN2-HRP conjugate. The assay sample and buffer are incubated together with LCN2-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the LCN2 concentration since LCN2 from samples and LCN2-HRP conjugate compete for the anti-LCN2 antibody binding site. Since the number of sites is limited, as more sites are occupied by LCN2 from the sample, fewer sites are left to bind LCN2-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The LCN2 concentration in each sample is interpolated from this standard curve.
