

Human c Jun N terminal kinases/stress activated protein kinase ELISA Kit | JUP elisa kit

Human c Jun N terminal kinases/stress activated protein kinase ELISA Kit

CATALOG #
AAA82577

REACTIVITY
Human

PRODUCT SYNONYMS

c Jun N terminal kinases/stress activated protein kinase; Human c Jun N terminal kinases/stress activated protein kinase ELISA Kit; JUP elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	5.0-100ng/mL
Sensitivity	1.0ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for JUP elisa kit

For samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate

INTENDED USE This SAPK ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human SAPK. This ELISA kit for research use only!

PRINCIPLE OF THE ASSAY SAPK ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-SAPK antibody and an SAPK-HRP conjugate. The assay sample and buffer are incubated together with SAPK-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the SAPK concentration since SAPK from samples and SAPK-HRP conjugate compete for the anti-SAPK antibody binding site. Since the number of sites is limited, as more sites are occupied by SAPK from the sample, fewer sites are left to bind SAPK-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The SAPK concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
