

Mouse Synaptopodin ELISA Kit | SYNPO elisa kit

Mouse Synaptopodin ELISA Kit

CATALOG #
AAA82670

REACTIVITY
Mouse

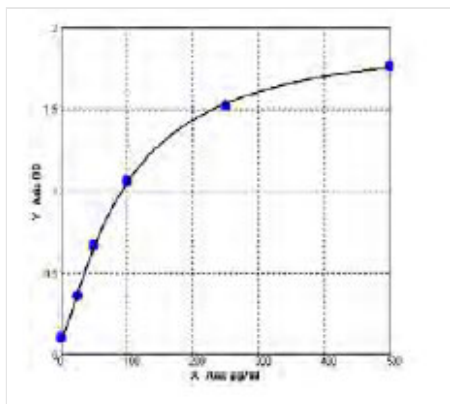

PRODUCT SYNONYMS

Synaptopodin; Mouse Synaptopodin ELISA Kit; SYNPO elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of SYNPO. No significant cross-reactivity or interference between SYNPO and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between SYNPO and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Sandwich
Sensitivity	1.0pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for SYNPO elisa kit	Intended Uses: This SYNPO ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse SYNPO. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: SYNPO ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for SYNPO. Standards or samples are then added to the microtiter plate wells and SYNPO if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of SYNPO present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for SYNPO are added to each well to "sandwich" the SYNPO immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain SYNPO and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The SYNPO concentration in each sample is interpolated from this standard curve.
Product Categories/Family for SYNPO elisa kit	Neurobiology

NCBI AND UNIPROT INFORMATION

NCBI GI #	33323347
Molecular Weight	73,667 Da
NCBI Official Full Name	synaptopodin
UniProt Protein Name	Synaptopodin
UniProt Gene Name	SYNPO
UniProt Synonym Gene Names	KIAA1029
UniProt Entry Name	SYNPO_HUMAN

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
