

Rabbit Complement Factor B ELISA Kit | CFB elisa kit

Rabbit Complement Factor B ELISA Kit

CATALOG #
AAA82684

REACTIVITY
Rabbit

PRODUCT SYNONYMS

Complement Factor B; Rabbit Complement Factor B ELISA Kit; CFB elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive or Sandwich
Detection Range	100-2500pg/mL
Sensitivity	1.0pg/mL
Intended Uses	This CFB ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit CFB. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

Principle of the Assay: CFB ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for CFB. Standards or samples are then added to the microtiter plate wells and CFB if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of CFB present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for CFB are added to each well to "sandwich" the CFB immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain CFB and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CFB concentration in each sample is interpolated from this standard curve.
