

Human Rheumatoid Factor ELISA Kit | RF elisa kit

Human Rheumatoid Factor ELISA Kit

CATALOG #
AAA82697

REACTIVITY
Human

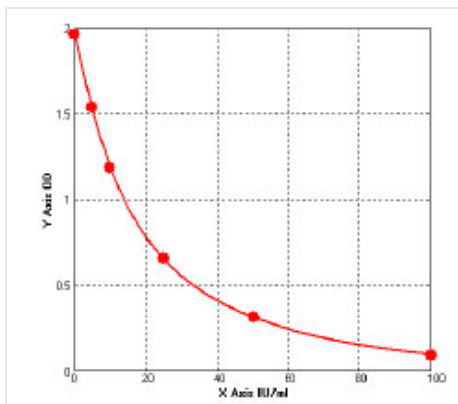

PRODUCT SYNONYMS

Rheumatoid Factor; Human Rheumatoid Factor ELISA Kit; RF elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of RF. No significant cross-reactivity or interference between RF and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between RF and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 IU/ml
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for RF elisa kit	Intended Uses: This RF ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human RF. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: RF ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-RF antibody and an RF-HRP conjugate. The assay sample and buffer are incubated together with RF-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the RF concentration since RF from samples and RF-HRP conjugate compete for the anti-RF antibody binding site. Since the number of sites is limited, as more sites are occupied by RF from the sample, fewer sites are left to bind RF-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The RF concentration in each sample is interpolated from this standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	58424195
NCBI Official Full Name	rheumatoid factor, partial

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
