

Human Azurocidin 1 ELISA Kit | AZU1 elisa kit

Human Azurocidin 1 ELISA Kit

CATALOG #
AAA82784

REACTIVITY
Human

PRODUCT SYNONYMS

Azurocidin 1; Human Azurocidin 1 ELISA Kit; AZU1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	1-25ng/mL
Sensitivity	0.1ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for AZU1 elisa kit	Intended Uses: This AZU1 ELISA kit is intended Laboratory for research use only.The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of AZU1 in the sample, this AZU1 ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus AZU1 concentration. The concentration of AZU1 in the samples is then determined by comparing the O.D. of the samples to the standard curve. Principle of the Assay: This AZU1 enzyme linked immunosorbent assay applies a technique called a quantitative sandwich immunoassay. The microtiter plate provided in this kit has been pre-coated with a monoclonal antibody specific for AZU1. Standards or samples are then added to the microtiter plate wells and AZU1 if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of AZU1 present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for AZU1 are added to each well to "sandwich" the AZU1 immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, A and B substrate solution is added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period.Only those wells that contain AZU1 and enzyme-conjugated antibody will exhibit a change in colour. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the colour change is measured spectrophotometrically at a wavelength of 450 nm.
