

Mouse Thymosin Beta 4 ELISA Kit | Tbeta4 elisa kit

Mouse Thymosin Beta 4 ELISA Kit

CATALOG #
AAA82792

REACTIVITY
Mouse

PRODUCT SYNONYMS

Thymosin Beta 4; Mouse Thymosin Beta 4 ELISA Kit; Tbeta4 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of Tbeta4. No significant cross-reactivity or interference between Tbeta4 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between Tbeta4 and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for Tbeta4 elisa kit	Intended Uses: This Tbeta4 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse Tbeta4. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: Tbeta4 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-Tbeta4 antibody and an Tbeta4-HRP conjugate. The assay sample and buffer are incubated together with Tbeta4-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the Tbeta4 concentration since Tbeta4 from samples and Tbeta4-HRP conjugate compete for the anti-Tbeta4 antibody binding site. Since the number of sites is limited, as more sites are occupied by Tbeta4 from the sample, fewer sites are left to bind Tbeta4-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Tbeta4 concentration in each sample is interpolated from this standard curve.
