

Mouse Nitrotyrosine ELISA Kit | NT elisa kit

Mouse Nitrotyrosine ELISA Kit

CATALOG #
AAA82808

REACTIVITY
Mouse

PRODUCT SYNONYMS

Nitrotyrosine; Mouse Nitrotyrosine ELISA Kit; NT elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	50-1000pg/mL
Sensitivity	1.0pg/mL
Intended Uses	This NT ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse NT. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for NT elisa kit

Principle of the assay: NT ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-NT antibody and an NT-HRP conjugate. The assay sample and buffer are incubated together with NT-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the NT concentration since NT from samples and NT-HRP conjugate compete for the anti-NT antibody binding site. Since the number of sites is limited, as more sites are occupied by NT from the sample, fewer sites are left to bind NT-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The NT concentration in each sample is interpolated from this standard curve.
