Related Product Information for PKCb1 elisa kit	For samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate INTENDED USE This PKCb1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat PKCb1. This ELISA kit for research use only! PRINCIPLE OF THE ASSAY PKCb1 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-PKCb1 antibody and an PKCb1-HRP conjugate. The assay sample and buffer are incubated together with PKCb1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PKCb1 concentration since PKCb1 from samples and PKCb1-HRP conjugate compete for the anti-PKCb1 antibody binding site. Since the number of sites is limited, as more sites are occupied by PKCb1 from the sample, fewer sites are left to bind PKCb1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PKCb1 concentration in each sample is interpolated from this standard curve.
