

Mouse Vitamin B1 ELISA Kit | VB1 elisa kit

Mouse Vitamin B1 ELISA Kit

CATALOG #
AAA82993

REACTIVITY
Mouse

PRODUCT SYNONYMS

Vitamin B1; Mouse Vitamin B1 ELISA Kit; VB1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	25-500ng/mL
Sensitivity	1.0ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for VB1 elisa kit	For samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate INTENDED USE This VD ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of mouse VD. This ELISA kit for research use only! PRINCIPLE OF THE ASSAY VD ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-VD antibody and an VD-HRP conjugate. The assay sample and buffer are incubated together with VD-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the VD concentration since VD from samples and VD-HRP conjugate compete for the anti-VD antibody binding site. Since the number of sites is limited, as more sites are occupied by VD from the sample, fewer sites are left to bind VD-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The VD concentration in each sample is interpolated from this standard curve.
---	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
