Related Product Information for NUP155 elisa kit	For samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate INTENDED USE This NUP155 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat NUP155. This ELISA kit for research use only! PRINCIPLE OF THE ASSAY NUP155 ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-NUP155 antibody and an NUP155-HRP conjugate. The assay sample and buffer are incubated together with NUP155-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the NUP155 concentration since NUP155 from samples and NUP155-HRP conjugate compete for the anti-NUP155 antibody binding site. Since the number of sites is limited, as more sites are occupied by NUP155 from the sample, fewer sites are left to bind NUP155-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The NUP155 concentration in each sample is interpolated from this standard curve
