

Rat alpha-glutathione S-transferases ELISA Kit | alpha-GST elisa kit

Rat alpha-glutathione S-transferases ELISA Kit

CATALOG #
AAA83795

REACTIVITY
Rat

PRODUCT SYNONYMS

alpha-glutathione S-transferases; Rat alpha-glutathione S-transferases ELISA Kit; a-glutathione S-transferases; alpha-glutathione S-transferases (Rat); alpha-GST elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Specificity	This assay has high sensitivity and excellent specificity for detection of GSTsA. No significant cross-reactivity or interference between GSTsA and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between GSTsA and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for alpha-GST elisa kit	Intended Uses: This GSTsA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat GSTsA. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: GSTsA ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-GSTsA antibody and an GSTsA-HRP conjugate. The assay sample and buffer are incubated together with GSTsA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the GSTsA concentration since GSTsA from samples and GSTsA-HRP conjugate compete for the anti-GSTsA antibody binding site. Since the number of sites is limited, as more sites are occupied by GSTsA from the sample, fewer sites are left to bind GSTsA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The GSTsA concentration in each sample is interpolated from this standard curve.
Product Categories/Family for alpha-GST elisa kit	Rat ELISA Kit

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
