

## Human sCD21 ELISA Kit | sCD21 elisa kit

Human sCD21 ELISA Kit

CATALOG #  
**AAA83841**

REACTIVITY  
**Human**

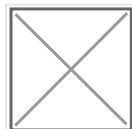

### PRODUCT SYNONYMS

sCD21; Human sCD21 ELISA Kit; sCD21 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                          |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                    |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                               |
| Assay Type              | Competitive or Sandwich                                                                                                                                                                  |
| Detection Range         | 25-500u/mL                                                                                                                                                                               |
| Sensitivity             | 1.0ug/mL                                                                                                                                                                                 |
| Intended Uses           | This SCD21 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human SCD21. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                      |

### ADDITIONAL INFORMATION

#### Related Product Information for sCD21 elisa kit

**Principle of the Assay:** SCD21 ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for SCD21. Standards or samples are then added to the microtiter plate wells and SCD21 if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of SCD21 present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for SCD21 are added to each well to "sandwich" the SCD21 immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain SCD21 and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The SCD21 concentration in each sample is interpolated from this standard curve.

#### Product Categories/Family for sCD21 elisa kit

Immunology

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
