

Rabbit Coagulation Factor X ELISA Kit | F10 elisa kit

Rabbit Coagulation Factor X ELISA Kit

CATALOG #
AAA83920

REACTIVITY
Rabbit

PRODUCT SYNONYMS

Coagulation Factor X; Rabbit Coagulation Factor X ELISA Kit; F10 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Specificity	This assay has high sensitivity and excellent specificity for detection of FX. No significant cross-reactivity or interference between FX and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between FX and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for F10 elisa kit	Principle of the Assay: FX ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-FX antibody and an FX-HRP conjugate. The assay sample and buffer are incubated together with FX-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the FX concentration since FX from samples and FX-HRP conjugate compete for the anti-FX antibody binding site. Since the number of sites is limited, as more sites are occupied by FX from the sample, fewer sites are left to bind FX-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The FX concentration in each sample is interpolated from this standard curve. Intended Uses: This FX ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit FX. This ELISA kit for research use only, not for therapeutic or test applications!

NCBI AND UNIPROT INFORMATION

NCBI GI #	182390
NCBI GeneID	2159
Molecular Weight	54,732 Da
NCBI Official Full Name	coagulation factor X
NCBI Official Synonym Full Names	coagulation factor X
NCBI Official Symbol	F10
NCBI Official Synonym Symbols	FX; FXA
NCBI Protein Information	coagulation factor X; factor Xa; prothrombinase; Stuart-Prower factor
UniProt Protein Name	Coagulation factor X
UniProt Gene Name	F10
UniProt Entry Name	FA10_HUMAN

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
