Intended Uses: This TTSAb ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Monkey TTSAb. This ELISA kit for research use only!

Principle of the Assay: TTSAb ELISA kit applies the competitive enzyme immunoassay technique utilizing Tetanus antigen and an TTSAb-HRP conjugate. The assay sample and buffer are incubated together with TTSAb-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the TTSAb concentration since TTSAb from samples and TTSAb-HRP conjugate compete for the Tetanus antigen binding site. Since the number of sites is limited, as more sites are occupied by TTSAb from the sample, fewer sites are left to bind TTSAb-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The TTSAb concentration in each sample is interpolated from this standard curve.
