

Rabbit beta-Anti-galactan proteins IgG ELISA Kit | bGPiGg elisa kit

Rabbit beta-Anti-galactan proteins IgG ELISA Kit

CATALOG #
AAA84344

REACTIVITY
Rabbit

PRODUCT SYNONYMS

beta-Anti-galactan proteins IgG; Rabbit beta-Anti-galactan proteins IgG ELISA Kit; Rabbit b-Anti-galactan proteins IgG ELISA Kit; bGPiGg elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	5.0-100ng/mL
Sensitivity	1.0ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for bGPiG elisa kit	Intended Uses: This ANP ELISA kit is intended Laboratory for research use only.The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of ANP in the sample, this ANP ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus ANP concentration. The concentration of ANP in the samples is then determined by comparing the O.D. of the samples to the standard curve. Principle of the Assay: This ANP enzyme linked immunosorbent assay applies a technique called a quantitative sandwich immunoassay. The microtiter plate provided in this kit has been pre-coated with a monoclonal antibody specific for ANP. Standards or samples are then added to the microtiter plate wells and ANP if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of ANP present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for ANP are added to each well to "sandwich" the ANP immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, A and B substrate solution is added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period.Only those wells that contain ANP and enzyme-conjugated antibody will exhibit a change in colour. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the colour change is measured spectrophotometrically at a wavelength of 450 nm.
Product Categories/Family for bGPiG elisa kit	Immunology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
