

Mouse Thromboglobulin, Beta ELISA Kit | bTG elisa kit

Mouse Thromboglobulin, Beta ELISA Kit

CATALOG #
AAA84525

REACTIVITY
Mouse

PRODUCT SYNONYMS

Thromboglobulin; Beta; Mouse Thromboglobulin; Beta ELISA Kit; bTG elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	50-1000pg/mL
Sensitivity	1.0pg/mL
Intended Uses	This BTG ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of mouse BTG. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

Related Product Information for bTG elisa kit

Principle of the Assay: BTG ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-BTG antibody and an BTG-HRP conjugate. The assay sample and buffer are incubated together with BTG-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the BTG concentration since BTG from samples and BTG-HRP conjugate compete for the anti-BTG antibody binding site. Since the number of sites is limited, as more sites are occupied by BTG from the sample, fewer sites are left to bind BTG-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The BTG concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
