

GuineaPig prostate specific ELISA Kit | PS elisa kit

Guinea Pig prostate specific ELISA Kit

CATALOG #
AAA84530

REACTIVITY
GuineaPig

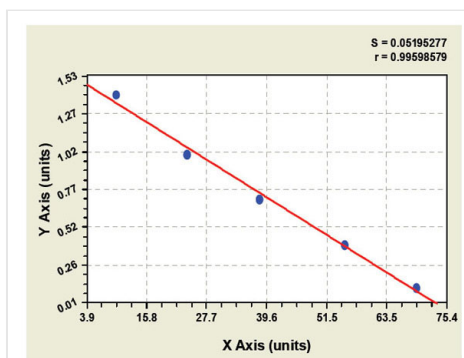

PRODUCT SYNONYMS

prostate specific; Guinea Pig prostate specific ELISA Kit; prostate specific (Guinea Pig); PS elisa kit

PRODUCT SPECIFICATIONS

Reactivity	GuineaPig
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for PS elisa kit

For Samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate

Intended Uses: This PSA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Guinea pig PSA. This ELISA kit for research use only!

Principle of the Assay: PSA ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-PSA antibody and an PSA-HRP conjugate. The assay sample and buffer are incubated together with PSA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PSA concentration since PSA from samples and PSA-HRP conjugate compete for the anti-PSA antibody binding site. Since the number of sites is limited, as more sites are occupied by PSA from the sample, fewer sites are left to bind PSA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PSA concentration in each sample is interpolated from this standard curve.
