ADDITIONAL INFORMATION

Related Product Information for CTLA4 elisa kit	For Samples: Serum, plasma, cell culture supernatants, body fluid and tissue homogenate Intended Uses: This CTLA4 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human CTLA4. This ELISA kit for research use only! Principle of the Assay: CTLA4 ELISA kit applies the competitive enzyme immunoassay technique utilizing amonoclonal anti-CTLA4 antibody and an CTLA4-HRP conjugate. The assay sample and buffer are incubated together with CTLA4-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CTLA4 concentration since CTLA4 from samples and CTLA4-HRP conjugate compete for the anti-CTLA4 antibody binding site. Since the number of sites is limited, as more sites are occupied by CTLA4 from the sample, fewer sites are left to bind CTLA4-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CTLA4 concentration in each sample is interpolated from this standard curve
