

Human Antistreptolysin O ELISA Kit | ASO elisa kit

Human Antistreptolysin O ELISA Kit

CATALOG #
AAA85026

REACTIVITY
Human

PRODUCT SYNONYMS

Antistreptolysin O; Human Antistreptolysin O ELISA Kit; ASO elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of ASO. No significant cross-reactivity or interference between ASO and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between ASO and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for ASO elisa kit	Intended Uses: This ASO ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human ASO. This ELISA kit for research use only! Principle of the Assay: ASO ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-ASO antibody and an ASO-HRP conjugate. The assay sample and buffer are incubated together with ASO-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ASO concentration since ASO from samples and ASO-HRP conjugate compete for the anti-ASO antibody binding site. Since the number of sites is limited, as more sites are occupied by ASO from the sample, fewer sites are left to bind ASO-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ASO concentration in each sample is interpolated from this standard curve.
---	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
