

Mouse CX3C-chemokine/Fractalkine ELISA Kit | FKN elisa kit

Mouse CX3C-chemokine/Fractalkine ELISA Kit

CATALOG #
AAA85178

REACTIVITY
Mouse

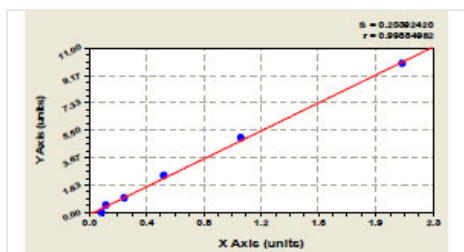

PRODUCT SYNONYMS

CX3C-chemokine/Fractalkine; Mouse CX3C-chemokine/Fractalkine ELISA Kit; FKN elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Sandwich (Quantitative)
Sensitivity	0.1 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

Intended Uses: This CX3C ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse CX3C. This ELISA kit for research use only!

Principle of the Assay: CX3C ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for CX3C. Standards or samples are then added to the microtiter plate wells and CX3C if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of CX3C present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for CX3C are added to each well to "sandwich" the CX3C immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain CX3C and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CX3C concentration in each sample is interpolated from this standard curve.
