

Human Pyruvate Dehydrogenase Phosphatase ELISA Kit | PDP elisa kit

Human Pyruvate Dehydrogenase Phosphatase ELISA Kit

CATALOG #
AAA85307

REACTIVITY
Human

PRODUCT SYNONYMS

Pyruvate Dehydrogenase Phosphatase; Human Pyruvate Dehydrogenase Phosphatase ELISA Kit; PDP elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive or Sandwich
Detection Range	100-2500pg/mL
Sensitivity	1.0pg/mL
Intended Uses	This PDP ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human PDP. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

Principle of the Assay: PDP ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for PDP. Standards or samples are then added to the microtiter plate wells and PDP if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of PDP present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for PDP are added to each well to "sandwich" the PDP immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain PDP and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PDP concentration in each sample is interpolated from this standard curve.
