

Rat Thrombin-antithrombin complex ELISA Kit | TAT elisa kit

Rat Thrombin-antithrombin complex ELISA Kit

CATALOG #
AAA85379

REACTIVITY
Rat

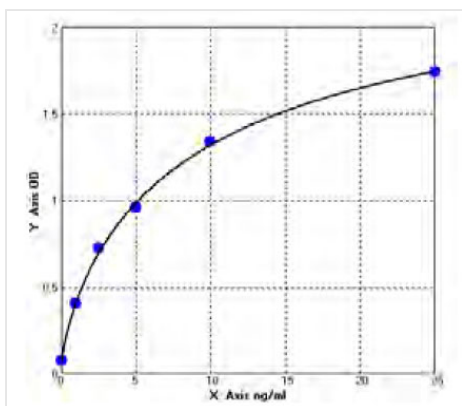

PRODUCT SYNONYMS

Thrombin-antithrombin complex; Rat Thrombin-antithrombin complex ELISA Kit; TAT elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Specificity	This assay has high sensitivity and excellent specificity for detection of TAT. No significant cross-reactivity or interference between TAT and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between TAT and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive or Sandwich
Sensitivity	0.1 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for TAT elisa kit	Intended Uses: This TAT ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat TAT. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: TAT ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for TAT. Standards or samples are then added to the microtiter plate wells and TAT if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of TAT present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for TAT are added to each well to "sandwich" the TAT immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain TAT and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The TAT concentration in each sample is interpolated from this standard curve.
Product Categories/Family for TAT elisa kit	Immunology

NCBI AND UNIPROT INFORMATION

NCBI GI #	301322950
Molecular Weight	8,343 Da
NCBI Official Full Name	tat, partial
UniProt Protein Name	Protein Tat
UniProt Gene Name	tat
UniProt Entry Name	E2FMT9_9HIV1

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
