

Rabbit 25-Dihydroxy vitamin D3 ELISA Kit | HVD3 elisa kit

Rabbit 25-Dihydroxy vitamin D3 ELISA Kit

CATALOG #
AAA85478

REACTIVITY
Rabbit

PRODUCT SYNONYMS

25-Dihydroxy vitamin D3; Rabbit 25-Dihydroxy vitamin D3 ELISA Kit; 25-Dihydroxy vitamin D3 (Rabbit); HVD3 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Assay Type	Sandwich
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for HVD3 elisa kit

Intended Uses: This HVD3 ELISA kit is intended Laboratory for research use only. The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of HVD3 in the sample, this HVD3 ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus HVD3 concentration. The concentration of HVD3 in the samples is then determined by comparing the O.D. of the samples to the standard curve.

Principle of the Assay: This HVD3 enzyme linked immunosorbent assay applies a technique called a quantitative sandwich immunoassay. The microtiter plate provided in this kit has been pre-coated with a monoclonal antibody specific for HVD3. Standards or samples are then added to the microtiter plate wells and HVD3 if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of HVD3 present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for HVD3 are added to each well to "sandwich" the HVD3 immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, A and B substrate solution is added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain HVD3 and enzyme-conjugated antibody will exhibit a change in colour. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the colour change is measured spectrophotometrically at a wavelength of 450 nm.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
