

Rabbit Cyclosporine A ELISA Kit | CsA elisa kit

Rabbit Cyclosporine A ELISA Kit

CATALOG #
AAA85506

REACTIVITY
Rabbit

PRODUCT SYNONYMS

Cyclosporine A; Rabbit Cyclosporine A ELISA Kit; CsA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	50-1000ng/mL
Sensitivity	1.0ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This CsA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit CsA. This ELISA kit for research use only!

Principle of the Assay||CsA ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-CsA antibody and an CsA-HRP conjugate. The assay sample and buffer are incubated together with CsA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CsA concentration since CsA from samples and CsA-HRP conjugate compete for the anti-CsA antibody binding site. Since the number of sites is limited, as more sites are occupied by CsA from the sample, fewer sites are left to bind CsA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CsA concentration in each sample is interpolated from this standard curve.
