

Human Adrenergic Receptor, Alpha 1A ELISA Kit | ADRAAlpha 1A elisa kit

Human Adrenergic Receptor, Alpha 1A ELISA Kit

CATALOG #
AAA85570

REACTIVITY
Human

PRODUCT SYNONYMS

Adrenergic Receptor; Alpha 1A; Human Adrenergic Receptor; Alpha 1A ELISA Kit; ADRAAlpha 1A elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Samples	Serum, Plasma, Cell Culture Supernatants, Body Fluid And Tissue Homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This ADPGK ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human ADPGK. This ELISA kit for research use only!

Principle of the Assay: ADPGK ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-ADPGK antibody and an ADPGK-HRP conjugate. The assay sample and buffer are incubated together with ADPGK-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ADPGK concentration since ADPGK from samples and ADPGK-HRP conjugate compete for the anti-ADPGK antibody binding site. Since the number of sites is limited, as more sites are occupied by ADPGK from the sample, fewer sites are left to bind ADPGK-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ADPGK concentration in each sample is interpolated from this standard curve.
