

Mouse Melanocyte stimulating hormone ELISA Kit | MSH elisa kit

Mouse Melanocyte stimulating hormone ELISA Kit

CATALOG #
AAA85662

REACTIVITY
Mouse

PRODUCT SYNONYMS

Melanocyte stimulating hormone; Mouse Melanocyte stimulating hormone ELISA Kit; MSH elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of MSH. No significant cross-reactivity or interference between MSH and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between MSH and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for MSH elisa kit	Intended Uses: This MSH ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse MSH. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: MSH ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-MSH antibody and an MSH-HRP conjugate. The assay sample and buffer are incubated together with MSH-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the MSH concentration since MSH from samples and MSH-HRP conjugate compete for the anti-MSH antibody binding site. Since the number of sites is limited, as more sites are occupied by MSH from the sample, fewer sites are left to bind MSH-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The MSH concentration in each sample is interpolated from this standard curve.
Product Categories/Family for MSH elisa kit	Signal Transduction

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
