

Rat Serum albumin, HSA ELISA Kit | HSA elisa kit

Rat Serum albumin, HSA ELISA Kit

CATALOG #
AAA85841

REACTIVITY
Rat

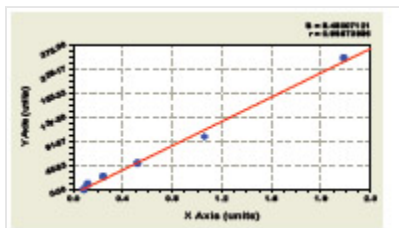

PRODUCT SYNONYMS

Serum albumin; HSA; Rat Serum albumin; HSA ELISA Kit; HSA ELISA Kit (Rat); HSA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	1.0 ug/mL.
Preparation and Storage	Store all reagents at 2-8 degree C

Intended Uses: This SALB ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat SALB. This ELISA kit for research use only!

Principle of the Assay: SALB ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for SALB. Standards or samples are then added to the microtiter plate wells and SALB if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of SALB present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for SALB are added to each well to "sandwich" the SALB immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain SALB and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The SALB concentration in each sample is interpolated from this standard curve.
