

## Guinea Pig Melanoma Marker A ELISA Kit | MART/Melan-A elisa kit

Guinea pig Melanoma Marker A ELISA Kit

CATALOG #  
**AAA85989**

REACTIVITY  
**Guinea Pig**

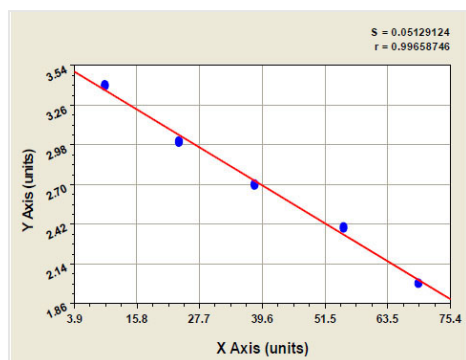

### PRODUCT SYNONYMS

Melanoma Marker A; Guinea pig Melanoma Marker A ELISA Kit; MART/Melan-A elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                             |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Guinea Pig                                                                                                                                                                                                  |
| Samples                 | Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate                                                                                                                                  |
| Assay Type              | Competitive                                                                                                                                                                                                 |
| Sensitivity             | 1.0 pg/mL.                                                                                                                                                                                                  |
| Intended Uses           | This MART/Melan-A ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Guinea pig MART/Melan-A. This ELISA kit for research use only, not for therapeutic applications! |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                                         |

### ADDITIONAL INFORMATION

#### Related Product Information for MART/Melan-A elisa kit

**Principle of the assay:** MART/Melan-A ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-MART/Melan-A antibody and an MART/Melan-A-HRP conjugate. The assay sample and buffer are incubated together with MART/Melan-A-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the MART/Melan-A concentration since MART/Melan-A from samples and MART/Melan-A-HRP conjugate compete for the anti-MART/Melan-A antibody binding site. Since the number of sites is limited, as more sites are occupied by MART/Melan-A from the sample, fewer sites are left to bind MART/Melan-A-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The MART/Melan-A concentration in each sample is interpolated from this standard curve.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
