

Mouse protein kinase C ELISA Kit | PKC elisa kit

Mouse protein kinase C ELISA Kit

CATALOG #
AAA86207

REACTIVITY
Mouse

PRODUCT SYNONYMS

protein kinase C; Mouse protein kinase C ELISA Kit; PKC elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of PKC. No significant cross-reactivity or interference between PKC and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between PKC and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	0.1 ng/mL
Intended Uses	This PKC ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of mouse PKC. This ELISA kit for research use only, not for therapeutic or diaanostic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for PKC elisa kit	Principle of the Assay: PKC ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-PKC antibody and an PKC-HRP conjugate. The assay sample and buffer are incubated together with PKC-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PKC concentration since PKC from samples and PKC-HRP conjugate compete for the anti-PKC antibody binding site. Since the number of sites is limited, as more sites are occupied by PKC from the sample, fewer sites are left to bind PKC-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PKC concentration in each sample is interpolated from this standard curve. Intended Uses: This PKC ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse PKC. This ELISA kit for research use only, not for therapeutic or test applications!
