

Mouse Omentin ELISA Kit | OMT elisa kit

Mouse Omentin ELISA Kit

CATALOG #
AAA86257

REACTIVITY
Mouse

PRODUCT SYNONYMS

Omentin; Mouse Omentin ELISA Kit; OMT elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	50-1000pg/mL
Sensitivity	1.0pg/mL
Intended Uses	This OMT ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse OMT. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

Principle of the assay: OMT ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for OMT. Standards or samples are then added to the microtiter plate wells and OMT if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of OMT present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for OMT are added to each well to "sandwich" the OMT immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain OMT and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The OMT concentration in each sample is interpolated from this standard curve.
