

Human Cytosolic Phospholipase A2 ELISA Kit | Cpla2 elisa kit

Human Cytosolic Phospholipase A2 ELISA Kit

CATALOG #
AAA86319

REACTIVITY
Human

PRODUCT SYNONYMS

Cytosolic Phospholipase A2; Human Cytosolic Phospholipase A2 ELISA Kit; Cpla2 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Detection Range	0.5-10ng/mL
Sensitivity	0.1ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This CPLA2 ELISA kit is intended Laboratory for research use only. The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of CPLA2 in the sample, this CPLA2 ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus CPLA2 concentration. The concentration of CPLA2 in the samples is then determined by comparing the O.D. of the samples to the standard curve

Principle of the Assay: This CPLA2 enzyme linked immunosorbent assay applies a technique called a quantitative sandwich immunoassay. The microtiter plate provided in this kit has been pre-coated with a monoclonal antibody specific for CPLA2. Standards or samples are then added to the microtiter plate wells and CPLA2 if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of CPLA2 present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for CPLA2 are added to each well to "sandwich" the CPLA2 immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, A and B substrate solution is added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain CPLA2 and enzyme-conjugated antibody will exhibit a change in colour. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the colour change is measured spectrophotometrically at a wavelength of 450 nm.
