

Rat Heavy Chain Immunoglobulin ELISA Kit | Ig-Hc elisa kit

Rat Heavy Chain Immunoglobulin ELISA Kit

CATALOG #
AAA86488

REACTIVITY
Rat

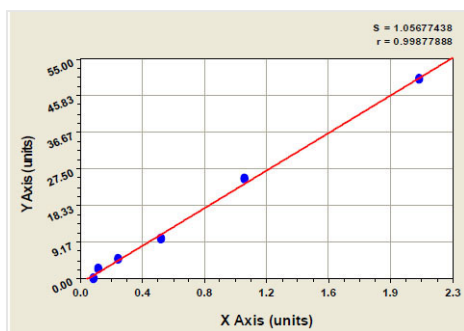

PRODUCT SYNONYMS

Heavy Chain Immunoglobulin; Rat Heavy Chain Immunoglobulin ELISA Kit; Ig-Hc elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	0.1 mg/dl.
Intended Uses	This Ig-Hc ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat Ig-Hc. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for Ig-Hc elisa kit

Principle of the assay: Ig-Hc ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for Ig-Hc. Standards or samples are then added to the microtiter plate wells and Ig-Hc if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of Ig-Hc present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for Ig-Hc are added to each well to "sandwich" the Ig-Hc immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain Ig-Hc and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The Ig-Hc concentration in each sample is interpolated from this standard curve.
