

Mouse Chymotrypsin ELISA Kit | chymotrypsin elisa kit

Mouse Chymotrypsin ELISA Kit

CATALOG #
AAA86493

REACTIVITY
Mouse

PRODUCT SYNONYMS

Chymotrypsin; Mouse Chymotrypsin ELISA Kit; chymotrypsin elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Assay Type	Sandwich
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for chymotrypsin elisa kit

Intended Uses: This CTNT ELISA kit is intended Laboratory for research use only. The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of CTNT in the sample, this CTNT ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus CTNT concentration. The concentration of CTNT in the samples is then determined by comparing the O.D. of the samples to the standard curve.

Principle of the Assay: This CTNT enzyme linked immunosorbent assay applies a technique called a quantitative sandwich immunoassay. The microtiter plate provided in this kit has been pre-coated with a monoclonal antibody specific for CTNT. Standards or samples are then added to the microtiter plate wells and CTNT if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of CTNT present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for CTNT are added to each well to "sandwich" the CTNT immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, A and B substrate solution is added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain CTNT and enzyme-conjugated antibody will exhibit a change in colour. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the colour change is measured spectrophotometrically at a wavelength of 450 nm.

NCBI AND UNIPROT INFORMATION

NCBI GI #	4210802
UniProt Accession #	O97398; P81521
Molecular Weight	29,868 Da
NCBI Official Full Name	chymotrypsin
UniProt Protein Name	Chymotrypsin
UniProt Entry Name	CTR_PHACE

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
