

Human major histocompatibility complex II ELISA Kit | MHC II/RLA II elisa kit

Human major histocompatibility complex II ELISA Kit

CATALOG #
AAA86553

REACTIVITY
Human

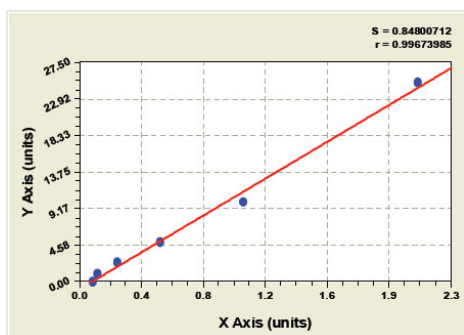

PRODUCT SYNONYMS

major histocompatibility complex II; Human major histocompatibility complex II ELISA Kit; major histocompatibility complex II (Human); MHC II/RLA II elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Sandwich
Sensitivity	0.1 ng/mL.
Intended Uses	This MHC2 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human MHC2. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C

ADDITIONAL INFORMATION

Related Product Information for MHC II/RLA II elisa kit

Principle of the Assay: MHC2 ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for MHC2. Standards or samples are then added to the microtiter plate wells and MHC2 if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of MHC2 present in the sample, a standardized preparation of horseradish peroxidase (HRP) -conjugated polyclonal antibody, specific for MHC2 are added to each well to "sandwich" the MHC2 immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain MHC2 and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The MHC2 concentration in each sample is interpolated from this standard curve.
