

Mouse True insulin ELISA Kit | TI elisa kit

Mouse True insulin ELISA Kit

CATALOG #
AAA86643

REACTIVITY
Mouse

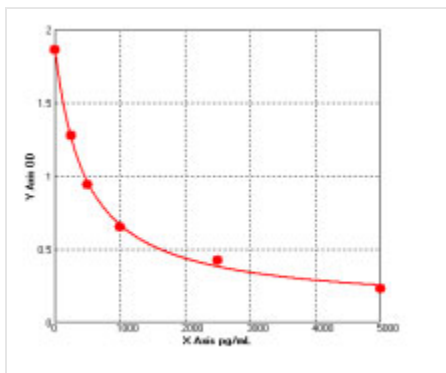

PRODUCT SYNONYMS

True insulin; Mouse True insulin ELISA Kit; TI elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of TINS. No significant cross-reactivity or interference between TINS and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between TINS and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for TI elisa kit	Principle of the Assay: TINS ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-TINS antibody and an TINS-HRP conjugate. The assay sample and buffer are incubated together with TINS-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the TINS concentration since TINS from samples and TINS-HRP conjugate compete for the anti-TINS antibody binding site. Since the number of sites is limited, as more sites are occupied by TINS from the sample, fewer sites are left to bind TINS-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The TINS concentration in each sample is interpolated from this standard curve. Intended Uses: This TINS ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse TINS. This ELISA kit for research use only, not for therapeutic or test applications!
--	--

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
