ADDITIONAL INFORMATION

Related Product Information for PTH1~34 elisa kit	Principle of the Assay: PTH1~34 ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-PTH1~34 antibody and an PTH1~34-HRP conjugate. The assay sample and buffer are incubated together with PTH1~34-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PTH1~34 concentration since PTH1~34 from samples and PTH1~34-HRP conjugate compete for the anti-PTH1~34 antibody binding site. Since the number of sites is limited, as more sites are occupied by PTH1~34 from the sample, fewer sites are left to bind PTH1~34-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PTH1~34 concentration in each sample is interpolated from this standard curve. Intended Uses: This PTH1~34 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat PTH1~34. This ELISA kit for research use only, not for therapeutic or test applications!
