

## Rabbit platelet-derived growth factor-BB ELISA Kit | PDGF-BB elisa kit

Rabbit platelet-derived growth factor-BB ELISA Kit

CATALOG #  
**AAA86739**

REACTIVITY  
**Rabbit**

### PRODUCT SYNONYMS

platelet-derived growth factor-BB; Rabbit platelet-derived growth factor-BB ELISA Kit; PDGF-BB elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Rabbit                                                                                                                                                                                                                                                                                                                                                                                            |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of PDGF-BB. No significant cross-reactivity or interference between PDGF-BB and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between PDGF-BB and all the analogues, therefore, cross reaction may still exist in some cases. |
| Samples                 | Serum, plasma, cell culture supernatants, body fluid and tissue homogenate                                                                                                                                                                                                                                                                                                                        |
| Assay Type              | Quantitative Competitive                                                                                                                                                                                                                                                                                                                                                                          |
| Sensitivity             | 0.1 ng/mL                                                                                                                                                                                                                                                                                                                                                                                         |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                                                                                                                                                                                                                               |

| Related Product Information for PDGF-BB elisa kit | <p>Intended Uses: This PDGF-BB ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit PDGF-BB. This ELISA kit for research use only, not for therapeutic or test applications!</p> <p>Principle of the Assay: PDGF-BB ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-PDGF-BB antibody and an PDGF-BB-HRP conjugate. The assay sample and buffer are incubated together with PDGF-BB-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PDGF-BB concentration since PDGF-BB from samples and PDGF-BB-HRP conjugate compete for the anti-PDGF-BB antibody binding site. Since the number of sites is limited, as more sites are occupied by PDGF-BB from the sample, fewer sites are left to bind PDGF-BB-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PDGF-BB concentration in each sample is interpolated from this standard curve.</p> |
