

Human Terminal complement complex C5b 9 ELISA Kit | TCC C5b 9 elisa kit

Human Terminal complement complex C5b 9 ELISA Kit

CATALOG #
AAA86855

REACTIVITY
Human

PRODUCT SYNONYMS

Terminal complement complex C5b 9; Human Terminal complement complex C5b 9 ELISA Kit; TCC C5b 9 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of C5b9. No significant cross-reactivity or interference between C5b9 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between C5b9 and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Competitive or Sandwich
Sensitivity	1.0pg/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for TCC C5b 9 elisa kit	Intended Uses: This C5b9 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human C5b9. This ELISA kit for research use only! Principle of the Assay: C5b9 ELISA kit applies the quantitative sandwich enzyme immunoassay technique. The microtiter plate has been pre-coated with a monoclonal antibody specific for C5b9. Standards or samples are then added to the microtiter plate wells and C5b9 if present, will bind to the antibody pre-coated wells. In order to quantitatively determine the amount of C5b9 present in the sample, a standardized preparation of horseradish peroxidase (HRP)-conjugated polyclonal antibody, specific for C5b9 are added to each well to "sandwich" the C5b9 immobilized on the plate. The microtiter plate undergoes incubation, and then the wells are thoroughly washed to remove all unbound components. Next, substrate solutions are added to each well. The enzyme (HRP) and substrate are allowed to react over a short incubation period. Only those wells that contain C5b9 and enzyme-conjugated antibody will exhibit a change in color. The enzyme-substrate reaction is terminated by addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The C5b9 concentration in each sample is interpolated from this standard curve.
Product Categories/Family for TCC C5b 9 elisa kit	Immunology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
